DETAILED ACTION

1. This communication is in response to the Supplemental Amendment filing on 27 February 2009. Claims 2, 5-8 and 15-30 were cancelled. New claims 31-39 have been added.

Allowable Subject Matter

2. Claims 1,3,4,9-14 and 31-39 are allowed.
3. The following is a statement of reasons for allowance:
4. It should first be noted that a 101 rejection of this case is not proper or was not made because of Applicant new language in the preamble which is a positive statement that all of the steps are carried out by computer readable program code. This is to say looking at claim 1, limitation (a) for example, that although the monitoring uses at least one processor, that there is no human assisting in the monitoring.
5. As for independent Claims 1 and 31 the prior art Patent Number 7,191,133 (Pettay) teaches that it was known to use automatic speech recognition to verify compliance of a script and if the agent has adequately followed the script. It fails to teach a correlation of deviation from script to that of a satisfaction value.
6. Patent 7,457,404 (Hession) teaches automatically recognizing words that when spoken during telephone call that may indicate a user is not satisfied then transferring customer to live agent, thus deviating from script.
7. Patent number 6,868,154 (Stuart) teaches an attempt to measure customer satisfaction, using speech analysis means by establishing a baseline during the call and

Art Unit: 3629

then monitoring to detect a deviation from that baseline. However this is relating to tone of calling customer, not the customers deviation from script.

8. The prior art in summation fails to teach a satisfaction value determined by assigning values to user's actions that correspond to sequence actions of an application script, adding these values, and subtracting the values of the actions that deviate from application script.
